

## Florida Recycled Water Tainted with Desecrated Fetal Human Remains

*This is an outrage!*

For over 21 years chemical abortion providers have instructed their *home user clients* to flush expelled *products of conception* (POC) down the toilet. This violates medical waste laws and endangers our natural resources.

- September 2000, the FDA first approved RU-486 (the abortion pill) for up to 7 weeks gestation.
- In 2016, after the abortion industry lobbied for fewer dispensing restrictions, the FDA revised and approved RU-486 for up to 10 weeks LMP (last menstrual period).

### Images of actual 10 week old fetuses

Abortion providers label these *blood clots and pregnancy tissue* and instruct home user clients to flush these babies down the toilet.

### The Pro-Life Pin

Is a life size replica of an actual 10 week old aborted baby

Intricate reclamation systems costing taxpayers millions of dollars were created to protect delicate eco-systems and serve community needs safely. How ironic and horrifying to discover these precious resources are compromised in such an evil way. Wherever you see purple pipes remains of aborted babies are in there!

Endangering public health and contaminating water resources is unconscionable and against the law.

### Doesn't the Abortion Industry Know it's Against the Law?

Yes. So do their legal advocates. Yet they do it anyway. Not surprising from an industry that puts very little value on human life. They disregard women's health, public safety, our environment, and the law. Is it an oversight or are they purposely trying to avoid paying for proper medical waste disposal fees?

#### **Consider this:**

None of the *medical abortion pill* patient consent forms, guidelines, or what to expect information provided advises the patient how to collect and dispose of aborted fetal remains or other pathogenic tissues.

Florida law states health care providers shall inform their home user clients verbally **and in writing** of the recommended method for handling biomedical waste generated in a home setting.

### Cruel and Pure Evil

If abortion pill reversal works within 72 hours, new research shows that a baby delivered within 48 hours might be born alive when expelled into the toilet. Reason being, both drugs used, mifepristone and misoprostol, are not fetocidal.

## Covid Risks

The current worldwide pandemic brings risks of its own. With more relaxed guidelines, we've seen a rampant increase in dispensing of abortion pills. Home users can self-date their baby's gestational age and are temporarily not required to get screened for infectious diseases, like Covid and HIV, before completing the procedure and flushing their bodily fluids, placenta, and fetal remains into the public waste system. The Black Plague lingered for years because of sewer vermin to human transmissions. We could be facing something similar, should vermin scavenge the sewer pipes en route to the treatment plant.

## Over Four Million

Since the FDA approval of RU-486, the abortion industry is responsible for over four million preborn babies being thrust into public sewer systems, all the while avoiding paying proper disposal fees for biomedical waste. This equates to hundreds of tons of preborn babies' remains, placentas, and other POC tissues. For perspective, reference: **Growth chart: Fetal length and weight, week by week** (link to: [https://www.babycenter.com/pregnancy/your-body/growth-chart-fetal-length-and-weight-week-by-week\\_1290794](https://www.babycenter.com/pregnancy/your-body/growth-chart-fetal-length-and-weight-week-by-week_1290794))

## Penalties for Non-Compliance

Currently, there remain 58 abortion mills in Florida. Using the Department for Environmental Protection's formula for minimum penalties: \$6,000 Administration fee + 7,665 x \$1,000 Days of non-compliance = \$7,671,000 per abortion facility. That's a total of \$444,918,000. Imagine how that would crush the abortion industry and preserve the environment in Florida if these fines and penalties were enforced!

### Florida Facts

- Flushing aborted babies down the toilet is unlawful.
- Florida regulations require abortion providers to assist home users in proper disposal of biomedical waste to protect public health, which these providers are violating.
- Through the Environmental Litigation Reform Act, the State of Florida Department of Environmental Protection has authority and a civil responsibility to impose penalties for such violations.
- Water is vital to Florida's environment, economy, and future. As such, proper treatment of wastewater is essential.
- Every person in Florida generates nearly 100 gallons of wastewater on a daily basis.
- Florida has more than 7,700 lakes, 4,500 square miles of estuaries and bays, 50,000 miles of rivers and streams, and a multitude of wetlands. Protecting state water quality is vital.
- For over 7,665 days (over 21 years), abortion providers have disregarded Florida's state laws governing biomedical waste disposal and benefited financially by not paying hundreds of thousands of dollars in proper medical waste disposal fees.

*And the Lord said, "What have you done? The voice of your brother's blood is crying to me from the ground."  
(Gen 4:10)*
