

Did you know?

- The 'Abortion Pill' is NOT emergency contraception or the morning after pill.
- Chemical abortion is FDA approved as safe and effective up to 10 weeks gestation.
- Chemical abortion forcefully expels a developing baby from her mother's womb.
- It has been reported by former abortion workers and traumatized post abortive women that health care providers have been instructing their home user clients to flush all the expelled 'products of conception' down the toilet.

This is a 10-week-old "product of conception" expelled after natural demise. Mothers who suffer a miscarriage at home are offered toilet inserts to 'catch' their babies. No baby should ever be flushed down a toilet.

What's the big deal?

- Chemical abortions are on the rise.
- Recent FDA Chemical abortion dispensing rules allow tele-med and mail order.
- 42,000 chemical abortions were reported by certified providers in Florida in 2020.
- There is an increasing number of online and black-market abortion pill vendors who are not certified and not required to report

Florida's natural water resources, reclaimed water and fertilizers are potentially laden with the remains of chemically aborted babies.

Aborted babies are not domestic sewage. Wastewater facilities are not designed to 'process' fetal remains and biomedical wastes. They are designed to process domestic wastewater into biosolids & discharge residual effluents to replenish waterways.

What's next?

- In 2021 Florida state legislators passed SB 64 incentivizing the development of 'potable' reuse projects by 2023.
- Will aborted baby fetal remains soon be in Florida's domestic re-cycled waters, too?

"You don't pass laws and then not enforce them against giant corporations. It doesn't work that way." (Gov. DeSantis 5/28/21)

- Florida fetal remains and biomedical disposal laws are not being enforced.
- Abortion providers are violating the law.
- Florida rules have severe fines and penalties for medical waste violators.
- Why are Health and Environment authorities not enforcing regulations to ensure "Florida's most vital resource" are being properly protected?

Did you know

- Red state Florida has 56 abortion mills
- In 2020, 74,868 abortions were performed in Florida (56% were chemical)
- Chemically aborted baby remains are most likely in Florida's reclaimed water

WHAT YOU CAN DO!

*Contact **Governor Ron DeSantis** (governorron.desantis@eog.myflorida.com, (850) 717-9337, (850) 717-9249 (850) 488-5603)

Please call or email once a day.

Ask if he is aware of the three facts stated on the cover of this brochure. Ask him, "as a pro-life governor what are you doing, or planning to do to address these serious issues related to the mass murder of preborn babies in Florida?"

*Contact the **Speaker of the House, Chris Sprowls** (727-793-2810, chris.sprows@myfloridahouse.gov) and the **Senate President, Wilton Simpson** (352-688-5077, Simpson.wilton@flsenate.gov)

Inform them that has 58 abortion facilities killing almost 75,000 babies per year and this is an outrage. Ask them what their plans are to deal with this scandal. Are they committed to passing a heartbeat bill similar to Texas (if Roe vs Wade is not overturned) and a trigger abortion ban (in case the Supreme Court does overturn Roe vs Wade?)

*Contact the **Attorney General of Florida, Ashley Moody** (850-414-3990 www.myfloridalegal.com/contact)

Ask what her office has done and will do to ensure that abortion facilities and abortionists are obeying all Florida statutes. For instance, why is the abortion industry not being held accountable for violating Florida statutes on the disposal of medical waste? A violation that is now polluting Florida's water supply.

Do they follow-up on reports of women wounded or even killed by abortion? Medicaid fraud?
